# 1. General information

## 1.1. Cantoni product range

Cantoni offers a full range of induction electric motors, from 0,04 kW up to 6000 kW, in standard and special executions. Cantoni motors operate in almost all industrial segments like: pumps, fans, compressors, conveyors, mining, power plants and many other fields. The Cantoni product range consists of standard motors according to IEC standard in efficiency classes IE1, IE2, IE3, IE4 and motors according to NEMA standard e.g. NEMA Premium motors. Apart from standard motors, it is possible to offer motors for special applications in marine, oil, gas, energy, construction and many other industries. All main components of the motors are produced in Europe (Poland) in order to guarantee the highest quality level. Particular importance is attached to the raw materials used for production, they are delivered only by qualified suppliers exclusively from the European Union.

The designs and solutions correspond to the customer requirements and international norms. All motors are manufactured according to Quality Management System consistent with ISO 9001 and Environmental Management System consistent with ISO 14001. Cantoni motors are provided with CE mark and fulfil the EU Directives regarding the safety measures. The motors comply with almost all international standards: German standards DIN VDE, British standards BS, Italian standards CEI and on request Canadian standards CSA, American standards UL, NEMA or EU standard ATEX.

## 1.2. Standards

The electric motors are manufactured according to the international standards:

Description	Standard
Rating and performance	IEC 60034-1
Methods for determining losses and efficiency	IEC 60034-2-1
Classification of degrees of protection	IEC 60034-5
Methods of cooling	IEC 60034-6
Symbols of construction and mounting arrangements	IEC 60034-7
Terminal markings and direction of rotation	IEC 60034-8
Noise limits	IEC 60034-9
Dimensions and output of electric machines	IEC 60072-1
Vibration limits	IEC 60034-14

## 1.3. Standard operating conditions

Cantoni motors can operate under the following conditions:

- Motor of series 2SIE - increased output are efficiency class IE2
- Motors are insulated with Class F (105K) materials and Class B temperature rise
- Motors are equipped with PTC 140°C. Other temperature values are available on request
- The standard degree of enclosure protection is IP55. Shafts are fitted with oil seal as standard
- The cooling method is IC411: TEFC (Totally Enclosed Fan Cooled)
- The standard voltage of the motors is 230/400V or 400/690V at a frequency of 50 Hz
- Motors are suitable for operating mode S1 (continuous operation)
- Motors are suitable to operate at an ambient temperature of -20°C / +40°C
- Motors are balanced Class A (½ key)
- Special executions are available on request (for example brake motors, marine execution, etc)

For other operating conditions, please contact Kolmer to check whether this condition is suitable or not.

## 1.4. Tolerances of motor parameters

Permissible deviations between real values and catalogue values according to IEC 60034-1:

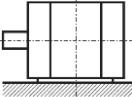

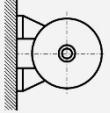

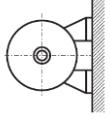

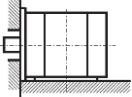

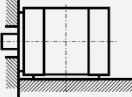

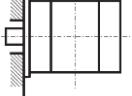

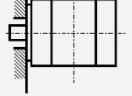

Description	Permissible deviations
Power factor cos φ	$\Delta \cos\varphi = -\frac{1}{6} \cdot (1 - \cos\varphi_N)$
Efficiency η	$\Delta\eta = -15\% \cdot (100 - \eta_N)$ for $P_N \leq 150 \text{ kW}$ $\Delta\eta = -10\% \cdot (100 - \eta_N)$ for $P_N > 150 \text{ kW}$
Speed n	$\Delta n = \pm 20\% \cdot (n_s - n_N)$ for $P_N > 1 \text{ kW}$ $\Delta n = \pm 30\% \cdot (n_s - n_N)$ for $P_N \leq 1 \text{ kW}$
Locked rotor current $I_L/I_N$	$\Delta \frac{I_L}{I_N} = +20\% \cdot \frac{I_L}{I_N}$
Locked rotor torque $T_L/T_N$	Min $\frac{T_L}{T_N} = -15\% \cdot \frac{T_L}{T_N}$ Max $\frac{T_L}{T_N} = +25\% \cdot \frac{T_L}{T_N}$
Breakdown torque $T_B/T_N$	$\Delta \frac{T_B}{T_N} = -10\% \cdot \frac{T_B}{T_N}$
Moment of inertia J [ $\text{kg} \cdot \text{m}^2$ ]	$\Delta J = \pm 10\% \cdot J$
Sound pressure level $L_{PA}$ [dB]	$\Delta L_{PA} = +3 \text{ dB} / A$

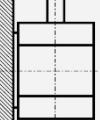

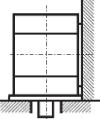

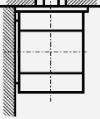

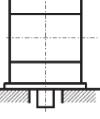

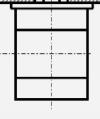

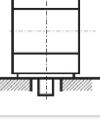

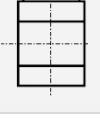

Standard motors comply with Voltage value and frequency variations within zone A according IEC 60034-1. Other tolerances of supply Voltage and their frequency are available on request.

Description	Permissible deviations
Voltage value U	$\Delta U = \pm 5\%$
Frequency f	$\Delta f = \pm 2\%$

## 1.5. Mounting arrangements

The most commonly used mounting arrangements are shown in the table below. Other mounting arrangements are available on request. According to the safety standard for electrical machines, foreign objects must be prevented from falling into the fan cover. On request, a protective hood (rain cover) can be mounted over the fan cover.

Horizontal shaft
